

AESTHETICS AND STRENGTH
IN PERFECT SYMBIOSIS.

ceramill® zolid ht+

ceramill® zolid ht+

AESTHETICS AND STRENGTH IN PERFECT SYMBIOSIS!

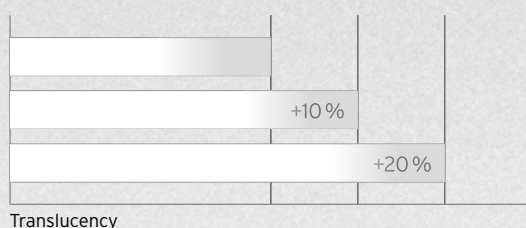

Ceramill Zolid HT+ is a highly translucent zirconium oxide which combines high mechanical characteristics with outstanding translucency. Even complex structures such as implant-supported bridges with a gingival component radiate the vitality of natural tooth substance.

MORE TRANSLUCENCY

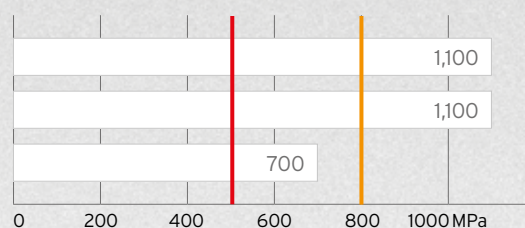

ceramill® zolid

ceramill® zolid ht+

ceramill® zolid fx

MAXIMUM FLEXURAL STRENGTH

3-point bending strength [MPa] DIN EN ISO 6872.

— Class 4: max. 3-pontic bridges

— Class 5: 4 to multi-pontic bridges

Perfectly customised colour shade results with "new formula" Ceramill Liquids

Outstanding edge stability through optimised processing properties

Perfect for implant-supported large-span work

- _ Full indication spectrum through high flexural strength of 1,100 MPa
- _ Top level aesthetics with natural look due to increased translucency
- _ Optimised processing integrated harmoniously into the AG zirconium oxide workflow
